FOREWORD

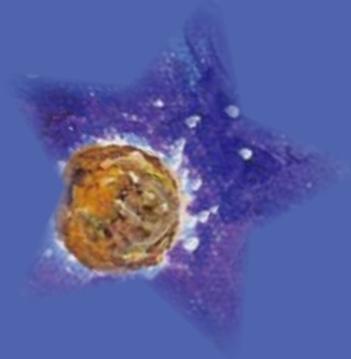

A great enlightened spiritual Master, Supreme Master Ching Hai has devoted herself to the teaching of the Quan Yin Method (a meditation method focusing on the Sound and the Light,) and the vegetarian way of life.

Supreme Master Ching Hai has often spoken about the existence of intelligent life on other planets, and of galactic civilizations. For example, she has revealed some surprising secrets about the past and present condition of our neighboring planet, Mars, and she described how the surface of Mars was destroyed by great catastrophes millions of years ago because of people's meat-eating habits and livestock-raising practices.

Q: Exactly what happened to the Martians?

Master: The mass extinction happened 40 million years ago. Hydrogen sulfide and methane from the livestock began to warm the climate and then triggered other gases from the ocean, from the permafrost and glaciers around their planet, just like what is happening to our planet right now.

The first survivors were about two million people. And now they have about five million, eight hundred thousand.

Now they live underground and they have to recycle everything: water, vegetables, very few things they have. They dug tunnels and big spaces, ceilings about ten meters high.

Q: Dear Master, could you please describe a bit more about the existing Martians?

Master: They look similar to us, but they are just better looking. They are more healthy looking, more radiant and more lovely. Their looks are more serene and more benevolent than most of us on the planet.

They can live up to 200 years old. They don't have stress. Their life is harmonious, peaceful, and loving in relationships. They share everything. This is a beautiful way of life, so they live long.

Even when they are very old, they still look very young. They look young until the day they die.

Q: Do they have any private vehicles?

Master: They have public and private flying cars and they have bicycles. These are all free for everyone. Nobody owns anything on Mars. Cars and airplanes, everything is free of charge. And they can also walk.

Their cars are almost the UFO-style, like a round disc, so it reduces the friction with the atmosphere.

They're faster, and they can turn around easily.

The fastest would be about 300 miles per hour.

That is about maybe 500 kilometers an hour.

Q: What kind of sceneries do they have underground?

Master: They have big public gardens with flowers, grass and trees. The highest trees would be about three meters high only. The highest house is about three stories. And only mud houses. No concrete, no cement houses.

They have some pets, some animals that we have no names for here on Earth. They have some dogs and some cows. They are treated like beloved pets or national treasures.

Q: What kind of energy do they use?

Master: Sun energy is out of the question. They don't have sun underground. They have artificial sun which is very nice, and it doesn't burn the skin, and they can turn it off and on whenever they want. They also have the moon for the night, a very mellow light for the night.

Q: What kind of government do Martians have?

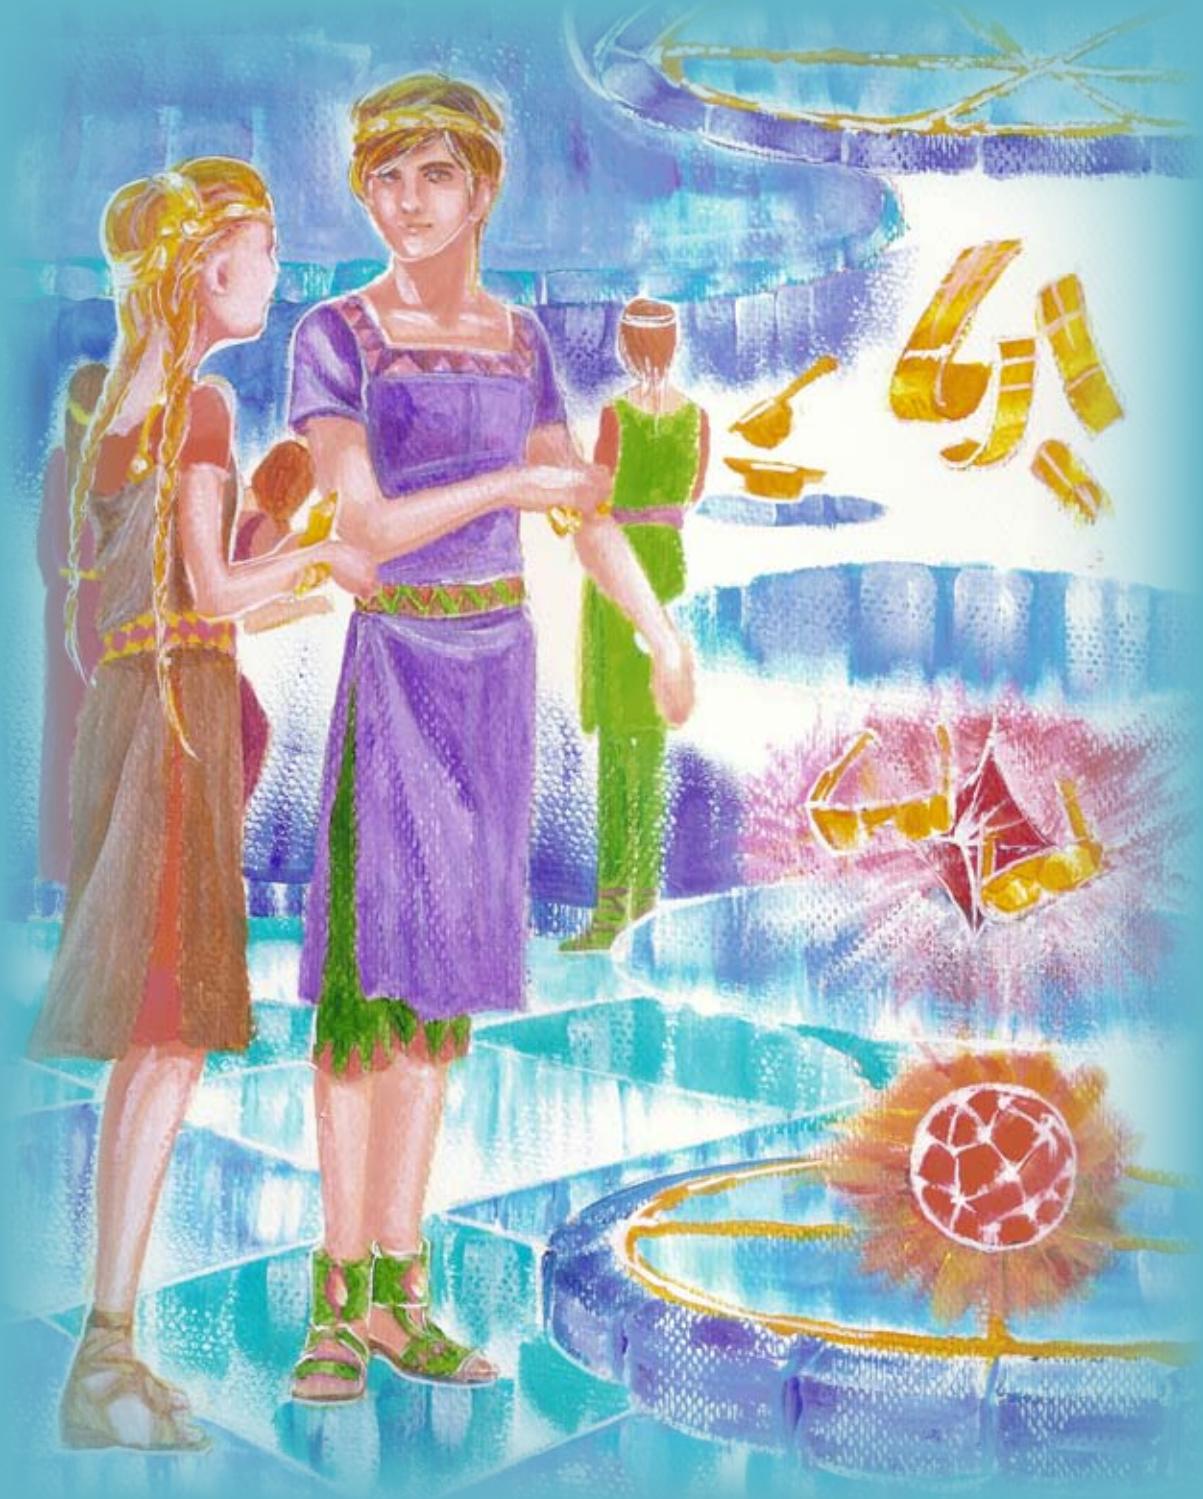

Master: They have almost like a non-governmental kind of system. People gather together and elect the wise persons who are absolutely unconditional, caring, honorable, and trustworthy.

In their government there's no bribery and no judiciary system. Everyone lives in mutual respect and harmony, respecting the regulations of the planet. So there's no conflict, no competition.

They select wise people for their leaders, the enlightened beings. They have a queen now at the moment. Anyone, even street sweepers, can be queen and king if they are enlightened enough and wise and virtuous.

The job of the queen and the council members is to improve the lifestyle of their people. They don't get any salary. They have the same as everybody else. Also, there's no police, no army, no weapons.

Q: Do Martians need to work for survival? And what kind of work do they do?

Master: Everyone contributes what they can honestly, sincerely, and happily. They share whatever they have. Each one works according to their abilities and talents. So they don't have to work at all for survival.

They work voluntarily and freely for the benefit of themselves and all, to contribute to their society, to their nation. And no one is forced to work because of money.

No government is there to levy tax on them. There is no extra work, no overtime, no stress, no boss, nothing like that.

There's no rich, no poor. No one owns more than anybody. Everything is equal. They wear simple clothes. They have a simple lifestyle. They don't have a market, but they share everything. There's no buying or selling over there.

Also, they don't get sick. They don't have doctors or nurses or hospitals there.

Q: What do Martians eat? Are they all vegetarians?

Master: Almost all of them are vegans. They are happy folks; they don't eat that much.

They're mostly very healthy. They don't stress for a living, so they don't really need that much food. They eat very little and healthily.

They eat cereals like us, some kinds, not all like what we have. Their farming is mostly hydroponic. They have fruit trees and they have cooking oil even.

Q: Can the Earth merge with other planets in the galaxy one day?

Master: Once we stop killing animals for meat consumption, then we will generate a more loving, kind, and inviting atmosphere for other noble beings in the galaxy to perhaps join us or be in contact with us.

Killing animals makes us humans the cruelest beings on the planet. The killing must stop and we replace it by virtuous ways of life that are also peaceful and kind. If all of humanity turns to such a standard, this world will be transformed indeed, heralding a true Golden Age of harmony and happiness for all beings.

When we earn the friendship of our more advanced neighboring planets, when we cease to be a threat to the universal harmony, when we cease to be a frightening group of a scary population, then other planet beings will visit us without invitation even.

They will come and invite us to their place to show us extraordinary technology that we could not even think of in a dream. Let's hope we have that day. And we can have interplanetary connection. That will be very nice.

Master: We have to protect this beautiful place we call Earth, because this is the home of not just us, but many other species, and the environment, beautiful flora and fauna. It's really an incredible place.

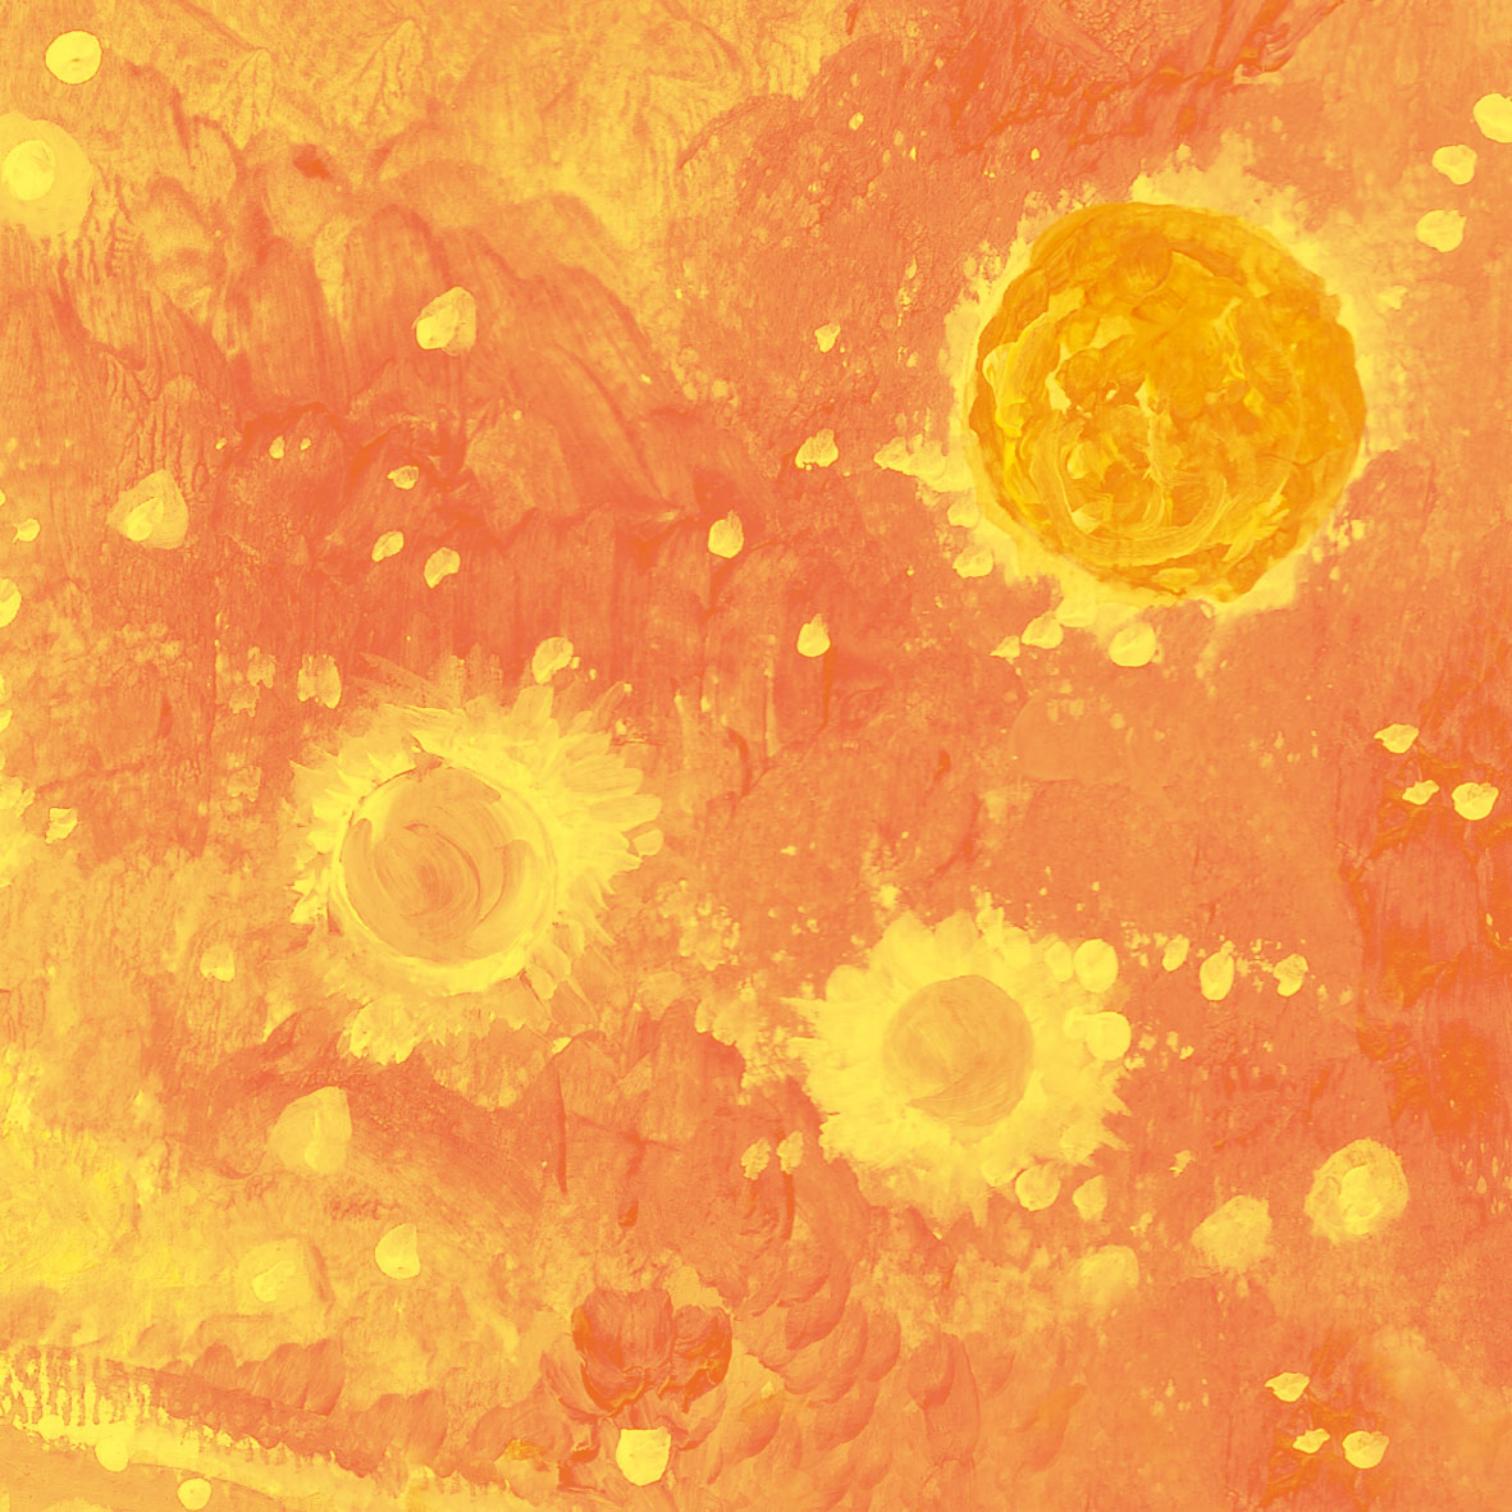

It took trillions of years to manifest such a planet. And it takes many, many meritorious, virtuous deeds of human beings or animals or other beings alike in order to garner into this energy in order to manifest a kind of planet like this.

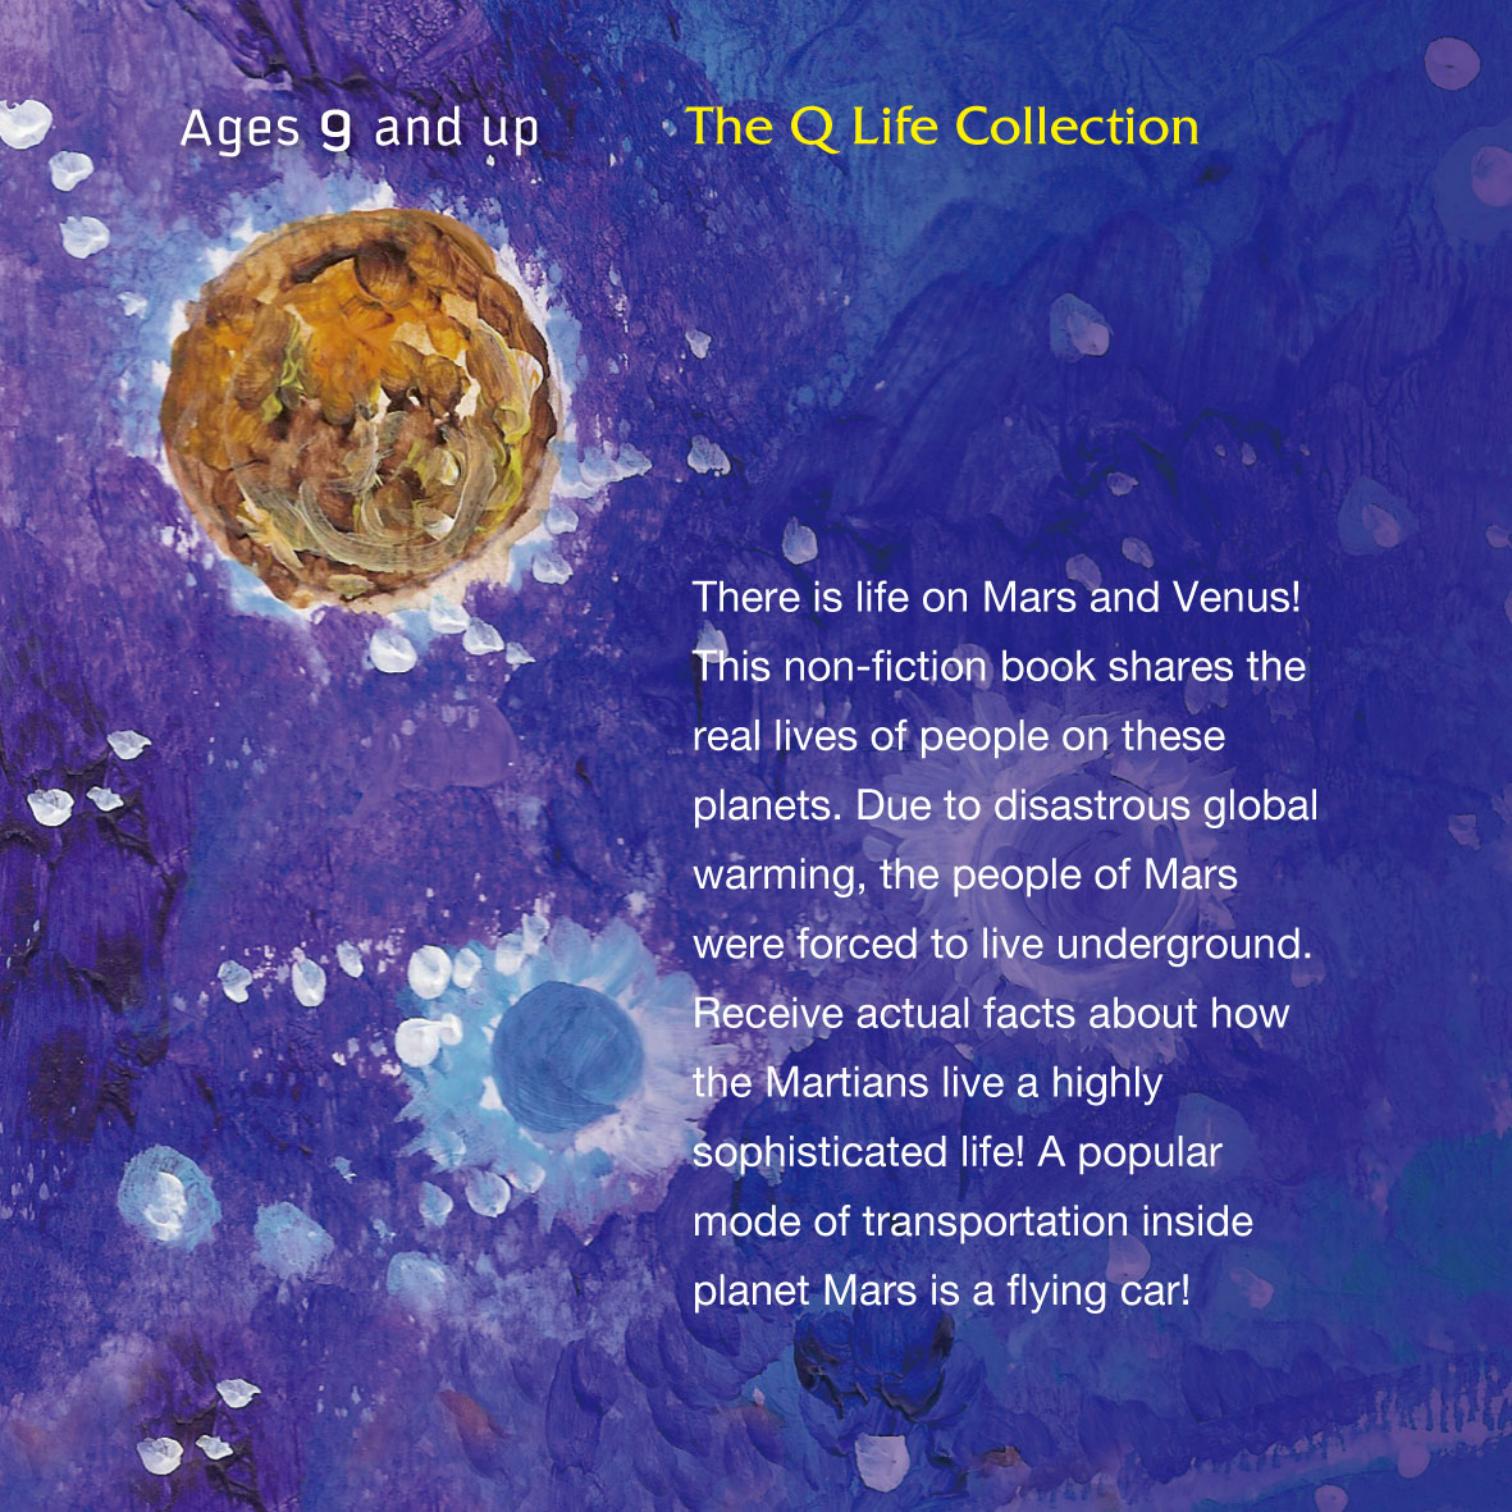

However much money we have, we cannot buy this planet. It's so exquisite; it's so special, so unique, so beautiful.

Not every planet is as beautiful as our planet, even though we have more beautiful planets. The peopled planets, not all are as beautiful as this. So, it is up to us to protect it.

Be Vegan. Make Peace.

Ages 9 and up

The Q Life Collection

There is life on Mars and Venus!
This non-fiction book shares the real lives of people on these planets. Due to disastrous global warming, the people of Mars were forced to live underground. Receive actual facts about how the Martians live a highly sophisticated life! A popular mode of transportation inside planet Mars is a flying car!
